Pred. No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.

LOCUS       HUMRBA1RA    4600 bp    mRNA            PRI       12-JUL-1995
DEFINITION  Human retinoblastoma associated (RB1) mRNA, complete cds.
ACCESSION   M33647 J02994
VERSION     M33647.1  GI:190945
KEYWORDS    retinoblastoma protein.
SOURCE      Homo sapiens (clone: p4.7R) cDNA to mRNA.
  ORGANISM  Homo sapiens
            Eukaryota; Metazoa; Chordata; Craniata; Vertebrata; Mammalia;
            Eutheria; Primates; Catarrhini; Hominidae; Homo.

Pred. No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.

This is the 5' sequence of the clone insert.
Clone from S. Wiemann, Molecular Genome Analysis, German Cancer Research Center (DKFZ); Email s.wiemann@dkfz-heidelberg.de; sequenced by BMFZ within the cDNA sequencing consortium of the German Genome Project.
No s1 sequence available.
This clone is available at the RZPD in Berlin.
Please contact the RZPD: Ressourcenzentrum, Heubnerweg 6, 14059 Berlin-Charlottenburg, GERMANY; Email: clone@rzpd.de.

PT   Method of controlling cell cycle progression - uses purified
PT   retinoblastoma protein or fragment, for use in combination with
PT   therapeutic methods to arrest tumorigenesis
PS   Disclosure; Fig 9; 68pp; English.
CC   The sequence is that of the retinoblastoma gene which encodes the
CC   retinoblastoma (RB) protein which may be used as part of a method of
CC   controlling cell cycle progression which may be used in combination
CC   with therapeutic methods to arrest tumourigenesis in organisms. The
CC   cell cycle can be reversibly arrested in a convenient and safe
CC   manner. The protein is used in a compsn. is relatively inexpensive
CC   and readily obtainable, and shows little or no toxic effects on
CC   healthy cells. It is also compatible with other methods and devices
CC   for regulating certain physiological processes of the body, such as
```

```
CC   blood cell prodn. and gamete prodn. Fragments of the protein are
CC   soluble in low concns. of glycerol thus enhancing their value in
CC   pharmaceutical applicns.

PT   Diagnosing the presence of defective retinoblastoma alleles -
PT   comprises comparing genetic material corresponding to a normal
PT   human retinoblastoma with DNA from a patient.
PS   Example 2(2); Figure 7; 18pp; English.
CC   A method for detecting the presence, in a tumour sample, of a protein
CC   the absence of which is associated with a neoplasm, comprises
CC   producing an antibody to the protein and then contacting the
CC   antibody with the tumour sample.  Immune complexes indicate the
CC   presence of the protein in the sample.  The method may be used in
CC   the detection and treatment of a defective human gene related to
CC   cancer, in particular retinoblastoma.

PT   Broad spectrum tumour suppressor gene - by using retinoblastoma
PT   gene product p94RB to suppress abnormal cell proliferation in the
PT   treatment of cancer
PS   Claim 4; Fig 1; 115pp; English.
CC   Q72690 is the fragment of p94RB (a broad-spectrum tumour suppressor
CC   gene) which encodes the 94kD therapeutic retinoblastoma protein
CC   R63564. Expression of this protein in an abnormally proliferating
CC   cell causes that cell to enter a senescent-like state, terminating
CC   the proliferation. R63564 also has the advantage of engendering a low
CC   incidence of tumour suppressor gene resistance in a population of
CC   treated cells.

PT   Adenoviral vector with deletion of viral protein IX contains
PT   foreign gene - esp. encoding tumour suppressor protein for gene
PT   therapy of tumours, reduces contamination by wild type adenovirus
PS   Disclosure; Fig 3; 92pp; English.
CC   The sequence is that of the DNA sequence encoding a retinoblastoma

PS Claim 22; Page 188-192; 249pp; English.
CC This sequence encodes a modified retinoblastoma tumour suppressor
CC protein (RTSP) of the invention. The proteins can be used for inhibiting
CC cellular proliferation, when coadministered with a p53 protein. The RTSPs
CC can be used for treating diseases characterised by abnormal cellular
CC proliferation, particularly cancers. The RTSPs have a broader spectrum of
CC activity than wild type RTSPs.

PT   Retinoblastoma suppressor protein with N-terminal modification -
PT   inhibiting cellular proliferation, particularly cancer
PS   Claim 22; Page 226-230; 249pp; English.
CC   This sequence encodes a modified retinoblastoma tumour suppressor
CC   protein (RTSP) of the invention. The proteins can be used for inhibiting
CC   cellular proliferation, when coadministered with a p53 protein. The RTSPs
CC   can be used for treating diseases characterised by abnormal cellular
CC   proliferation, particularly cancers. The RTSPs have a broader spectrum of
CC   activity than wild type RTSPs.

PT Retinoblastoma suppressor protein with N-terminal modification - inhibiting cellular proliferation, particularly cancer
PS Claim 22; Page 142-147; 249pp; English.
CC This sequence encodes a modified retinoblastoma tumour suppressor protein (RTSP) of the invention. The proteins can be used for inhibiting cellular proliferation, when coadministered with a p53 protein. The RTSPs can be used for treating diseases characterised by abnormal cellular proliferation, particularly cancers. The RTSPs have a broader spectrum of activity than wild type RTSPs.

PT Retinoblastoma suppressor protein with N-terminal modification - inhibiting cellular proliferation, particularly cancer
PS Claim 22; Page 158-162; 249pp; English.
CC This sequence encodes a modified retinoblastoma tumour suppressor protein (RTSP) of the invention. The proteins can be used for inhibiting cellular proliferation, when coadministered with a p53 protein. The RTSPs can be used for treating diseases characterised by abnormal cellular proliferation, particularly cancers. The RTSPs have a broader spectrum of activity than wild type RTSPs.

LOCUS       HUMRBSA     2994 bp    mRNA            PRI       12-JUL-1995
DEFINITION  Human retinoblastoma susceptibility protein mRNA, complete cds.
ACCESSION   M28419
VERSION     M28419.1  GI:190962
KEYWORDS    retinoblastoma protein; retinoblastoma susceptibility protein.
SOURCE      Homo sapiens retinoblastoma cDNA to mRNA.
  ORGANISM  Homo sapiens
            Eukaryota; Metazoa; Chordata; Craniata; Vertebrata; Mammalia;
            Eutheria; Primates; Catarrhini; Hominidae; Homo.

Pred. No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.

                      library is a subtracted library derived from the UI-R-A0
                      library. The UI-R-A0 library  consisted of a mixture of
                      individually tagged normalized libraries constructed from
                      rat placenta, adult lung, brain, liver, kidney, heart,
                      spleen, ovary, and muscle. The tag is a string of 3-5
                      nucleotides present between the Not I site and the
                      oligo-dT track which allows identification of the library
                      of origin of a clone within the mixture. The subtracted
                      library (UI-R-A1) was constructed as follows: PCR
                      amplified cDNA inserts from a pool of approximately 3,840
                      UI-R-A0 clones from which 3' ESTs had been derived was
                      used as a driver in a hybridization with the UI-R-A0
                      library in the form of single-stranded circles. The
                      remaining single-stranded circles (subtracted library) was
                      purified by hydroxyapatite column chromatography,
                      converted to double-stranded circles and electroporated
                      into DH10B bacteria (Life Technologies) to generate the
                      UI-R-A1 library. This procedure has been previously
                      described (Bonaldo, Lennon and Soares, Genome Research 6:
                      791-806, 1996)"
